

OSINT Reconnaissance Report

Note: This report is intended strictly for documentation and educational purposes .

1) General Information

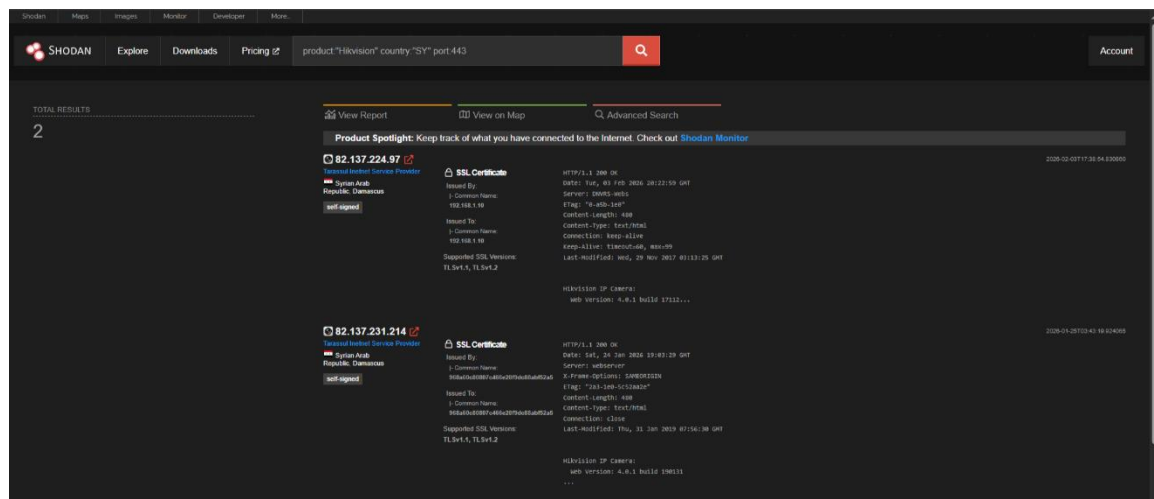

- **Target Domain Name:** Syrain arab republic – cams and dvr (hikvesion)
- **Assessment Date:**10/2/2026
- **Analyst Name:** Mustafa Jbili
- **Scope of Work:** Cybersecurity Analyst
- **Objective:** Detection and reconnaissance process

2) Methodology & Tools

- **Methodology:** Open Source Intelligence (OSINT) / Reconnaissance
- **Tools Used:**
 - Shodan.io

3) Findings

This search is presenting numbers of hikvesion cams is located in Syria and the result as it shown below :

At First there was no chance to find any result related to country "Syria" before applying filters
but after that I became manged to find results by applying the filter in the query :

product:"Hikvision" country:"SY" port:443

Detailed Explanation of the Shodan Filters

This Shodan search query is designed to narrow down results using three specific filters: product, country, and port. Each filter plays a different role in refining the search results.

1.product:"Hikvision"

What It Does:

The product filter searches for a specific product name identified by Shodan during its banner-grabbing and fingerprinting process.

How It Works:

Shodan scans internet-facing devices and services, collecting metadata such as:

- Service banners
- HTTP headers
- SSL certificates
- Device signatures
- Protocol responses

2. country:"SY"

What It Does:

The country filter limits results to a specific country based on IP geolocation.

How It Works:

Shodan determines a device's physical location using:

- IP address allocation data
- ASN (Autonomous System Number)
- ISP ownership records
- Geolocation databases

3. port:443

What It Does:

The port filter restricts results to devices or services that are responding on a specific TCP port.

Why Port 443?

- Port 443 is the default port for:
- HTTPS (HTTP over SSL/TLS)
- Secure web interfaces
- Encrypted management panels
